Dear Paul:

I hope the accompanying sketch helps to clarify the question of where the fill from the excavation of the stormwater facility will be stored. The quantity of material, about 9,000 cubic yards, will not occupy a great deal of space. Therefore, our use of the term "quadrant" was somewhat less informative than we realized.

The intended location is actually the extreme southwest corner of Cerro's property east of Dead Creek, as shown on the sketch.

Again, please call if you have further questions.

Cordially,

~~Carl J.~~ Schafer
